About iEMSs 2018

iEMSs is the official biennial conference of the International Environmental Modelling & Software Society, which sponsors of the highly regarded journal, Environmental Modelling & Software.

Northern Colorado is home to over 150 multinational corporations, universities, governmental agencies, and research organizations engaged with environmental concerns and opportunities with considerable experience in modelling, data management, and consulting to assist policy making and on the ground solutions. Those existing capacities and the Colorado Front Range provide an excellent backdrop for the international community of scientists, researchers, and environmental managers participating in this event.

Colorado State University has longstanding research, education, and training programs in natural resources management. CSU is committed to its sustainability efforts, and the world is taking notice. CSU is the first and only campus in the world to ever receive a STARS Platinum rating. Through innovative programs and outreach initiatives CSU works to reduce waste, preserve natural resources, and support environmentally friendly building practices.

The congress will take place at the CSU Mountain Campus in the newly remodeled Lory Student Center, conveniently located close to historic Old Town with easy access to public transportation, bicycle rentals and the Cache la Poudre River.
